Name:_____ Period:_____

Exit Ticket: Rock Cycle Infographic

Put It Together	One Rock's Journey

PAPER · No device needed

1.Pick any rock on page 15. Follow it through **four** stops on the rock cycle. Write a rock or material in each box, and write the process for each arrow below. Every process you use must be printed somewhere on page 15.

Process on arrow 1: _____

Process on arrow 2: _____

Process on arrow 3: _____

Reference Table Practice

Use only your printed Reference Tables, page 15, to answer these questions. Circle the number of the best answer.

____2.A rock sample has large, interlocking crystals that are easy to see and shows no layering. According to the Rock Cycle Infographic, this rock most likely formed by

(1)rapid cooling of lava at Earth's surface
(2)slow cooling of magma deep underground
(3)compaction and cementation of sand
(4)evaporation of seawater

____3.Which sequence shows rocks forming under increasing heat and pressure?

(1)Gneiss → Schist → Phyllite → Slate
(2)Shale → Slate → Phyllite → Schist
(3)Schist → Slate → Shale → Gneiss
(4)Slate → Shale → Schist → Phyllite

____4.A student finds a rock made of rounded pebbles cemented together with sand. Which process on page 15 was the last step in forming this rock?

(1)Mechanical and chemical weathering
(2)Erosion and sorting of sediments
(3)Compaction, Cementation (Lithification)
(4)Cooling / Crystallization / Solidification

____5.On the Rock Cycle Infographic, Gypsum and Rock salt form mainly because of

(1)precipitation of minerals as seawater evaporates
(2)burial and compaction of plant material
(3)melting of rock by mantle heat
(4)recrystallization of limestone
