EARTH & SPACE SCIENCE

SCIENCE EXPLORER: ROCK DESIGN PLAN

Plan your Science Explorer now so you can paint the moment the supplies come out.

Name: _____ Period: _____

1 NAME YOUR SCIENCE EXPLORER

Write three name ideas. **Circle** the one you are going with. This name will be used on every slide you submit this year, so pick one you will still like in June.

Idea 1	Idea 2	Idea 3

2 PLAN YOUR DESIGN

Answer in a few words or a short sentence.

What is the ONE thing someone should notice first about your rock? (a face, pattern, symbol, etc.)

_____

Which colors will you use, and why will they stand out against grass, snow, pavement, and dirt?

_____

What makes your rock different from everyone else's?

_____

_____

Where will you keep it so it is with you when you spot something worth photographing?

_____

3 THE PHOTO TEST

Picture your finished rock in a real photo. Check each one you are confident about. If you cannot check a box, make changes to your plan.

- ☐ It will show up against white snow.
- ☐ It will show up against green grass.
- ☐ It will show up against gray pavement and brown dirt.
- ☐ It is bright enough to see in a low-light photo (sunset, night sky, moon shots).
- ☐ It is small enough to carry in a pocket or backpack.
- ☐ The design is realistic to paint on a small rock.

4 DRAW YOUR DESIGN

Color your design. This is the side that will usually face the camera. On paint day you should be copying this drawing, not inventing one.

REMEMBER

Your Science Explorer has to be clearly visible in every photo you submit this year. A rock that is too dull, or too much like everyone else's will become unseeable or confusing.
