Mineral ID Lab- Sample Cards (if absent)

SAMPLE 1	
Color	Silver-gray
Streak test	Gray-black powder
Breakage (hand lens)	Breaks along flat, smooth surfaces that meet at right angles. Broken pieces look like small cubes.
Luster (tilted under light)	Shines like a metal when tilted under the light.
Glass scratch test	No scratch remained on the glass after wiping it clean.
Other observations	Feels very heavy for its size.

SAMPLE 2	
Color	Clear to milky white
Streak test	No streak (no colored mark was left on the plate)
Breakage (hand lens)	Breaks with curved, shell-like surfaces. No flat surfaces repeat.
Luster (tilted under light)	Looks glassy. Does not shine like a metal.
Glass scratch test	Left a scratch on the glass that stayed after wiping it clean.
Other observations	Some pieces form six-sided crystals.

SAMPLE 3	
Color	Pink
Streak test	White powder
Breakage (hand lens)	Breaks along two sets of flat, smooth surfaces that meet at about right angles. Some surfaces look step-like.
Luster (tilted under light)	Looks glassy to pearly. Does not shine like a metal.
Glass scratch test	Left a scratch on the glass that stayed after wiping it clean.
Other observations	Not see-through.

SAMPLE 4	
Color	Brassy gold
Streak test	Greenish-black powder
Breakage (hand lens)	Breaks with rough, uneven surfaces. No flat surfaces repeat.
Luster (tilted under light)	Shines like a metal when tilted under the light.
Glass scratch test	Left a scratch on the glass that stayed after wiping it clean.
Other observations	None.

SAMPLE 5	
Color	Colorless to white
Streak test	White powder
Breakage (hand lens)	Breaks along flat, smooth surfaces that meet at right angles. Broken pieces look like small cubes.
Luster (tilted under light)	Looks glassy. Does not shine like a metal.
Glass scratch test	No scratch remained on the glass after wiping it clean.
Other observations	A small piece dissolved in water. This mineral has a salty taste, but never taste lab samples.
